

Crestron Connect It™

Crestron Connect It™ (TT-100) is a cost-effective, simple-to-use presentation interface delivering versatile connectivity, cable management and one-touch control, all in one stylish tabletop device that's easy to install. A *Crestron Connect It* interface can be installed at every seat for natural, free-flowing collaboration and switching among participants in any sized space, from huddle room to conference room.

Clear the tables

Crestron *Connect It* cleanly stores HDMI®, VGA, audio and Ethernet cables in a stylish cubby hole. Connect directly to the display for simple, reliable presentation for less than you'd expect.

Simple connectivity

Instead of running all the wires to the display, connect to Crestron DigitalMedia™ at the table. Transmit HDMI, VGA, and audio long distance over a single CAT5E, and get added control and automation.

Show me

When the button is blue, it means you're connected and ready to present. Press the button. Green means you're live. It's that easy.

Collaboration made easy

Work together as a team. With *Crestron Connect It* at every seat, simply press one of the soft-touch buttons to share information and ideas.

Easy installation

Just drill a standard 4-inch round hole through the tabletop and then secure it with the twist-on fitting. No need for templates or measuring.
